initially missed entire column but by comparing against image & text it filled missing data

Employee Tax description doesn't have dedicated column name, so initially status was merged into it but later corrected

Duplicate column was removed appropriately

In Deductions, calc code & Frequency columns are very close in image & their values are contextually same so it got confused on 1st try but later Judge identified issue & gave appropriate feedback to extractor with which it corrected itself

Advantages over current Google Doc AI based approach

- No need of adding samples for each feild example, i.e not possible every time.
- No need of labeling, which required humongous effort & time
- No OCR errors
- No Hidden text issues
- Auto validating & capable enough to correct its own mistakes
- No dependencies for any bug fixes, feature implementations or flag enablement, etc.
